Re: HasHaltcoin [Blackminer F1] - Bittawm Trust Review
November 08, 2018, 03:33:24 AM quote #2

These guys are first one with working FPGA based miners, with cloud hosting added on. I have two hosted F1s, and it was pretty smooth experience. They were up and running in no time after payment. There was some issue with the first one to get it running, but was sorted out in few minutes via help on Discord. A very surprising customer experience for something running in that part of the work.

Quite a few available algos, and more coming. Though the cloud option could use few more configuration options to select pool/ports /coins.

AllMine/Mineority take note. This is the benchmark for FPGA, and cloud hosting.

[Ethereum Cloud Mining Calculator Ltcminer](#)

- Works on your hardware: Running on thousands of rigs with thousands of different components.

- Extremely lightweight: Works with weakest possible CPU made in the last 5 generations on only 2gb of ram..
- Stratum enabled: Automatically configured to mine via efficient stratum
- Automatic reporting: Web panel with detailed rig statistics, charts, and event reports ().

[Patch Custom Maid 3d English Translation](#)

- Supports all hardforks and softforks: No need for extra Blockchain storage, blockchain syncing handled by pools and wallets..
- Browser-based terminal: allow setup and configuration of ethOS rigs by connecting to their IP addresses via your web browser..

EthOS Mining OS ethOS is a 64-bit linux OS that mines Ethereum, Zcash, Monero, and other GPU-minable coins.. Altcoins can be autotraded to Bitcoin Please see the for documentation and answers to common questions. [Hp Format Usb Flash Drive](#)
